

# **Project : Library**

## Pages and modules list

### 1. Home page

Home page will contain the listings of books, that contains all the options like an e Commerce website. Books will be displayed under several categories and genres. The books can be sorted by different criteria, it contains navigation panel to find products or pages customer looking for.

### 2. Product page

Product page will be a descriptive page of a selected book. This page will also work like a e commerce product page, i e, it contains every available details of that book including user reviews.

### 3. Cart, Renew and history page

This is where customers can see the book they are going to get next, renew the book they already have and a history of books that they already read.

### 4. A. Login / sign up page

Login and sign up page is used to create user accounts and logging into them.

### 5. User / Account details update page

This is the page used to update user details such as address, contact details etc.

### 6. Book assigning

This is where we can assign the books for the next round delivery for each people.

### 7. Delivery assigning

This is where we can assign the delivery boys for the specific location or selected customers.

### 8. Live tracking

In this page both user and control centre can track the delivery boy live location.

### 9. Delivery boy account creation and delivery marking

This page is used to create account for delivery boys and mark their delivery of a cart that has been assigned for them.

### 10. Subscription and payment gateway

This page is used to make purchase and making subscriptions.
